Streamlining IT Procurement

Ideation Phase – Completed Artifacts

Date	30 September 2026
Team ID	**SWTID-2026-2123**
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Primary Platform	ServiceNow

Scope: Define Problem Statements for the Standard Laptop procurement workflow.

3. Define the Problem Statements

Customer Problem Statement Canvas

The statements below follow the supplied template fields: Customer, I'm trying to, But, Because, and Which makes me feel.

Problem Statement	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	an employee / requester	request a Standard Laptop quickly through ServiceNow	manual steps can create uncertainty and the fulfillment handoff may require waiting or follow-up	the configuration task is not automatically created and assigned until the process is automated	uncertain about whether my request is moving forward and what happens next
PS-2	an IT procurement / Hardware team member	process an approved Standard Laptop request consistently	manual configuration-task creation can be missed or delayed	the fulfillment task needs to be created, populated, and assigned after approval	concerned about delays and additional manual effort

Design challenge derived from the problem statements: How might we make an approved Standard Laptop request move into a clearly owned configuration task automatically, while keeping status visible to the requester and IT stakeholders?

Traceability to the supplied project

Artifact	Traceability
Empathy Map	Uses requester goals, pains, feelings, interactions, and opportunities described in the supplied Customer Journey Map.
Brainstorming	Builds idea groups around the supplied Flow Designer workflow: approval trigger, Catalog Task creation, Hardware assignment, task details, and status verification.
Problem Statements	Uses the customer perspective and the I-am / I'm-trying-to / But / Because / Which-makes-me-feel structure from the supplied template.

End of Ideation Phase Artifacts
