Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

•*Problem–Solution Fit*

Date	30 September 2026	**Team ID**	SWTID-2026-2123
Project Name	Standard Laptop Order Automation	**Platform**	ServiceNow Flow Designer

1. Problem–Solution Fit Template

The source template defines Problem–Solution Fit as confirming that the identified customer problem is actually addressed by the realized solution, while understanding the existing situation and customer behavior.

Element	Project-specific content
Target customer / user	IT procurement team, hardware team, and employees requesting a standard laptop through the Service Catalog.
Existing problem	Standard laptop requests require manual follow-up and configuration coordination. Configuration can be overlooked or delayed, causing longer user wait times and inefficient use of IT resources.
Customer pain / annoyance	Users wait for laptops to be configured after arrival; procurement and hardware teams spend time on manual task creation, assignment, and follow-up.
Current behavior / process	A user places a Standard Laptop request in the Service Catalog. After approval, a catalog task must be created/updated and assigned to the Hardware group for configuration.
Proposed solution	Use ServiceNow Flow Designer to automatically create a Catalog Task after an approved Standard Laptop request, populate the task details, and assign it to the Hardware group.
Problem–solution fit	The automation directly addresses the manual task-creation and assignment gap identified in the current process. The resulting task reaches the Hardware team promptly for configuration.
Expected customer outcome	Reduced waiting time, fewer manual steps, more timely laptop configuration, and a more seamless procurement experience.
Success indicators	Approved requests automatically generate the expected Catalog Task; the task is assigned to Hardware; configuration work is visible in the Requested Item/Catalog Tasks section; manual intervention is reduced.
