Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

• *Solution Architecture Canvas*

Date	30 September 2026	**Team ID**	SWTID-2026-2123
Project Name	Standard Laptop Order Automation	**Platform**	ServiceNow Flow Designer

3. Solution Architecture Canvas

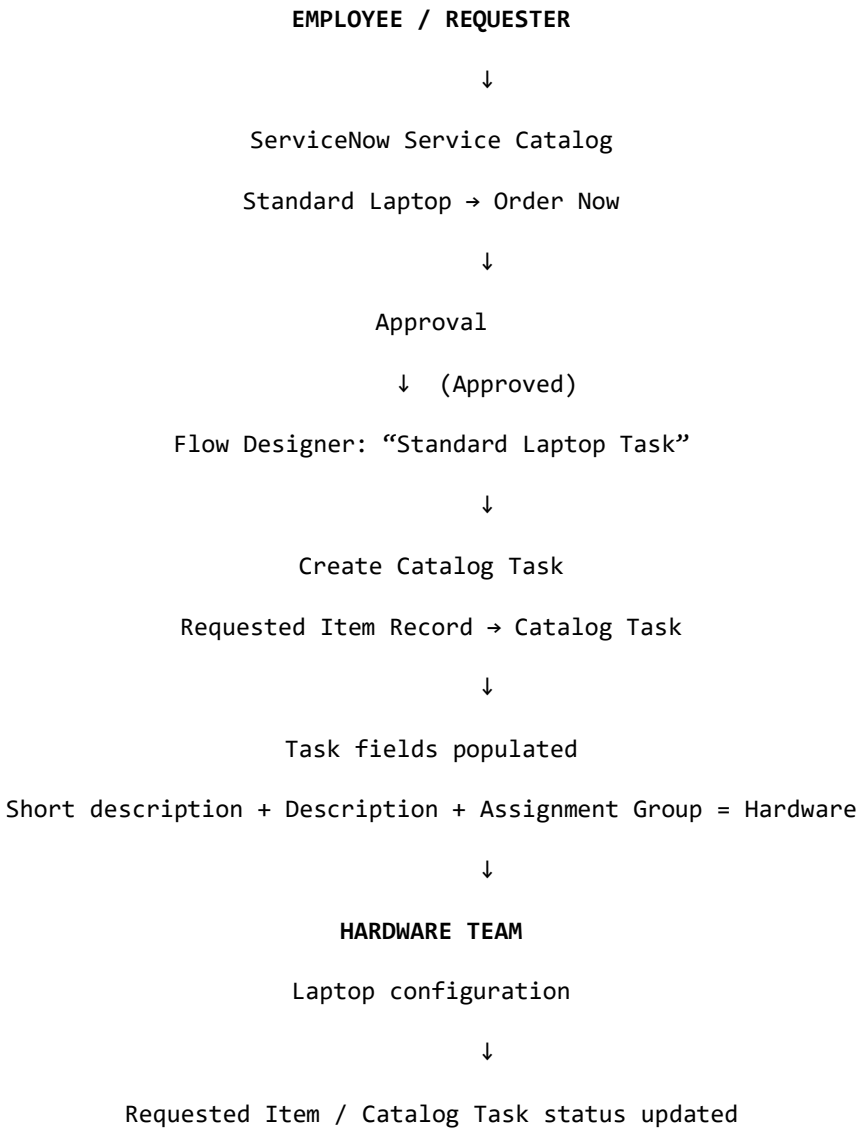

The supplied architecture template describes solution architecture as the bridge between business problems and technology solutions, covering the solution structure/behavior, features, requirements, and delivery specifications. □ □ □ □

3.1 Architecture Canvas

Architecture area	Design for this project
Business problem	Manual standard-laptop procurement coordination causes delays, configuration oversight, and unnecessary IT administrative work.
Business objective	Automate task generation and assignment so approved standard-laptop requests reach the Hardware team for timely configuration.
Users / stakeholders	Employees/requesters; IT procurement team; Hardware team; approvers; ServiceNow administrators.
Technology platform	ServiceNow with Service Catalog, Requested Item records, Catalog Tasks, and Flow Designer.
Trigger	Service Catalog process/request for the Standard Laptop item, with approval condition configured for Approved requests.
Core automation	Flow Designer creates a Catalog Task from the Requested Item record.
Task data	Short description: “Laptop need to Configured”; Description: “Laptop need to Configured”; Assignment group: Hardware; Approval: Approved.

Integration / data movement	Standard Laptop Service Catalog request → approval → Flow Designer → Catalog Task → Hardware assignment → laptop configuration.
Security / control	Use the System user execution setting specified in the project steps; only approved requests should create the configuration task.
Monitoring / verification	Open the Requested Item and review the Catalog Tasks section to confirm the generated task, short description, assignment group, and status.
Key requirements	Flow must be active; Standard Laptop catalog item must use the flow; approval must be respected; task must be assigned to Hardware.
Expected outcome	Faster and more consistent configuration, reduced manual intervention, improved resource utilization, and better user experience.

3.2 Solution Architecture / Data Flow

3.3 End-to-End Workflow

1. 1. Employee opens Service Catalog → Hardware → Standard Laptop.
2. 2. Employee selects Order Now and submits the request.
3. 3. Request goes through the approval process.
4. 4. When approval is Approved, the configured Flow Designer automation runs.
5. 5. The flow creates a Catalog Task from the Requested Item.
6. 6. The task is populated with the configuration description and assigned to Hardware.
7. 7. Hardware team performs laptop configuration.
8. 8. IT/procurement can verify the generated task and its status under the Requested Item → Catalog Tasks section.

3.4 Architecture Components & Responsibilities

Component	Responsibility	Output
Service Catalog	Provides the Standard Laptop request entry point.	Requested Item / request
Approval process	Controls whether the request is approved for downstream processing.	Approved request
Flow Designer	Orchestrates automation after the configured trigger/condition.	Automated Catalog Task creation
Requested Item record	Provides the request context used by the flow.	Source record for task creation
Catalog Task	Represents the hardware configuration work.	Assigned configuration task
Hardware assignment group	Receives and performs the laptop configuration task.	Configured laptop

3.5 Implementation Checklist

☐ Create Flow Designer flow: “Standard Laptop Task”.

☐ Set Application = Global.

☐ Set Run as = System user.

☐ Add Service Catalog trigger.

☐ Add Create Catalog Task action.

☐ Map Requested Item Record to Request item.

☐ Set Short description and Description to “Laptop need to Configured”.

☐ Set Assignment group = Hardware.

☐ Set Approval = Approved.

☐ Save and Activate the flow.

☐ Open Maintain Items → Standard Laptop → Process Engine.

☐ Remove remaining automations and add the created flow.

☐ Test an approved Standard Laptop request and verify the Catalog Task.

3.6 Expected Benefits

- Seamless experience for users requesting standard laptops.
- Reduced manual intervention and potential process errors.
- Improved hardware-team task allocation.
- Timely laptop configuration upon arrival.
- Better IT procurement efficiency and productivity.

Source basis: This completed document follows the structure of the three supplied templates and the project workflow document. The project source specifically describes the Flow Designer creation, Standard Laptop catalog assignment, Service Catalog ordering, approval, and Catalog Task verification steps. □filecite□turn0file3□L25-L57□ □filecite□turn0file3□L59-L87□

Project conclusion: The supplied project concludes that automating standard laptop procurement with ServiceNow Flow Designer reduces manual overhead, supports timely configuration, improves resource allocation, and enhances user experience. □filecite□turn0file3□L89-L96
